

inform Vario

- optimised ergonomics and a well-organised clinic in one complete solution

Vario is the name of inform's most flexible treatment module to date. We have aimed to create the ultimate work station for the dentistry team, regardless of whether the work is performed alone or in pairs, or whether the dentist is right or left-handed.

Well-ordered, satisfying work with ideal ergonomics

In the Vario system, all materials and instruments are positioned based on their frequency of use, putting the most frequently used items within easy reach.

The instrument tray's position in relation to the dentist's chair also enables the dentist to work in the 9, 10, 11 and 12 o'clock positions without compromising his/her working

posture in relation to the patient. This provides a complete treatment module enabling clinics to achieve markedly improved efficiency, even for minor procedures.

Elegant details are standard features

Easy-to-clean work surfaces in DuPont™ Corian®, unique concave fronts and solid aluminium details are just some of inform's many exclusive solutions that are standard features of inform Vario. Others include:

- flexible wall cabinets with room for both half and full organiser trays
- 4 extension leaves
- computer cabinet
- aluminium panel for installations.

inform Vario

- inspiration for well-conceived drawer furnishing

The position of the drawer is shown here on inform Vario.

Drawer 3.1: the clinic's most important drawer

This is the clinic's most important drawer with eight organisers for organising a total of about eighty different small items (usually requiring about three drawers). The small-item organisers are made in a milky white POM material that can be washed and disinfected in a Miele dishwasher (not autoclave-proof). Each organiser measures $W = 10.5 \text{ cm}$, $L = 18 \text{ cm}$.

The drawer can hold:

Cotton rolls of various sizes, wedges, discs (large and small), section matrices, separation rings, flat standard matrices, contoured metal matrices (Hawe) for plastic, plastic matrices, matrix-holders, proxitectors, metal-diamond separation strips, plastic strips, contour strips, "corner plastic matrices", wedges, various sticks, plastic polishing strips (narrow and wide), perforated metal strips (Kornet) narrow and wide for wide overhang, Cavit, rubber cups, various rotating brushes, articulation paper in various thicknesses and plastic compules.
