

# BACK UP™

Improve your posture and  
increase your productivity

**BQE**<sup>®</sup>  
BACK QUALITY ERGONOMICS  
STOOLS & CHAIRS  
DUTCH DESIGN

All BQE work stools and chairs are designed in such a way that it is easy to adopt a better sitting posture while working, which gives the stools/chairs a clear preventative and curative character. Development and production are based on the general scientific background, specific studies and practical experience.

## The Back Up™

An ergonomic chair with an oblique seat part to sit more close to the patient or / and the microscope and with maximal back support.

Sitting in a healthy posture shows a trunk-knee angle (or angle between upper and lower legs) of 110° or more (hydraulic adjustable), so that a slight hollow curvature of the spine is obtained, comparable with a more standing position.

The backward rounding of the spine is avoided to prevent overloading .

To obtain a balanced sitting posture the seat bones rest on the horizontal part of the seat and the thighs on an oblique part.

The counter pressure (cp) of the oblique part is adjustable through the hydraulic button (a).

There is also a mechanic version and a fixed version. See internet [www.bqe.nl](http://www.bqe.nl)

mechanic adjustment

with solid BQE 04 armrests
