Oral hygiene

Prophylaxis.

Apollo prophyl Jet is an air powered polishing system in the form of a straight handpiece connected to a coupling. Light and easy to clean, Apollo prophyl Jet guarantees optimal results when removing stains and is used with Magic Pearl prophylaxis powder.

The 80mm attachment, set at a 60° angle, is star-shaped so the 4 sprays provide the necessary precision to treat hard to reach areas.

The handpiece, which can be autoclaved, is connected to a tank.

The tank has 8 holes guaranteeing perfect air circulation.

MODEL APJ KV

APOLLO Prophy Jet KaVo® MULTIflex® coupling

MODEL APJ NM

APOLLO Prophy Jet NSK® PTL® QUICK coupling

MODEL APJ WH

APOLLO Prophy Jet W&H® Roto Quick® coupling

MODEL APJ BA

APOLLO Prophy Jet Bien- air® Unifix® coupling

MODEL APJ M4

APOLLO Prophy Jet - Connection Midwest 4 holes

Magic Pearl

For around ten years, MAGIC PEARL powder has proved to be a reliable and non-aggressive prophylaxis powder. The polishing effect of the grains provides gentle effective cleansing. Today, we have improved MAGIC PEARL yet further.

Micro-beads 50 to 60um

Non-abrasive mechanical tooth cleaning

Respect for the enamel

Enamel protection, tested in a professional laboratory.

Treatments

Prophylactic and gum disease treatments

pH Stabilisation

Reduces oral acidity, neutralises pH within 10 days.

Effectiveness

Significant increase in whiteness.

Limits gingival haemorrhages

Significant coagulant effect, especially in the gums during subgingival treatment.

Developed and tested by dentists.

Magic Pearl powder has spherical grains which safely eliminate stains, biofilm and tartar without causing a risk to the tooth enamel and gums. Its calcium-carbonate based composition helps to minimise cleaning of your air polisher.

Approved by European and international standards.

The powder reduces the acidity of oral fluids and prevents the development of bacteria by impeding the formation of biofilm. This product is ideal for treating the teeth of patients sensitive to sodium bicarbonate or who suffer from high blood pressure.

Non-abrasive, non-invasive.

The very low hardness* of the CaCO_3 particle is less than the hardness of the dentine, so it does not damage the enamel while the hardness of other powders (NaHCO_3) has an abrasive effect on the tooth surface.
