

# inform hygiene system

- scandinavish design for your clinic wall

inform has gathered all clinic dispensers into one revolutionary system that looks good on any clinic wall. inform hygiene system was developed in cooperation with leading Danish industrial designers who have focused on expressing the essence of Scandinavian design to ensure that practicality and consistent styling form a perfect harmony.

The dispensers are made with aluminium fronts and can be mounted in a row or by themselves. The fronts are easy to open for refilling and, if you wish to add to the system later on, merely order the dispenser and wall rail for the particular model.

The mounting rail can be shortened to suit the number of dispensers you wish to set up in your clinic.
